

## The Challenge

The Genesis building design required the specialized installation of the Oldcastle Reliance Cassette Curtainwall system, which demands pre-glazing in the shop to streamline on-site installation. As a ground-up construction project, precise field measurements were essential to ensure a perfect fit. The building's square design and transitional steps added complexity, requiring a subcontractor with advanced technical expertise and meticulous attention to detail.

## The Solution

Brin Glass Company was the ideal partner for this project, bringing extensive experience with the required curtainwall system and a trusted partnership with Oldcastle for seamless material sourcing. Our shop capacity allowed us to handle pre-glazing, ensuring efficient installation. With our glazing expertise, we provided precise field measurements and collaborated closely on design feedback to ensure every detail was accurate and met expectations.

## Results Accomplished

The completed project delivered a sleek, modern design that impressed both the client and our general contractor partner. Brin installed over 5,200 square feet of glass, including a custom three-leaf bi-fold door system for the showroom floor that serves as a standout feature.

### General Contractor

**Project Start** April 2023

**Project End** October 2024

## Why was Brin Glass best suited for this project?

Brin Glass Company delivered on this project through key strengths: a long-standing partnership with Oldcastle for smooth material sourcing, ample shop capacity for precise pre-glazing, and 113+ years of glazing expertise for accurate field measurements and seamless curtainwall execution. Our collaborative project management ensured clear communication and design consultation, meeting all goals and exceeding expectations.
